

Qwizdom Mac Connect: Remote Setup

If setting up remotes for the first time, we recommend the following steps.
(Note: You will only have to do this once.)

1. Click the *Remotes* menu and select *Configuration Preferences*.
2. Type in the number of remotes in your set.
3. Select only the remote types you will be using.
4. Select the host type.
5. Select your preferred configuration.
Use “Set with Fixed Remote ID” unless the remotes are participant-owned.

If you have newer remotes, received in 2012 or later, click **OK**. (You're finished!)

If you have older hardware, received in 2011 or earlier, plug in your USB host and click the *Assigned Fixed Remote IDs* button. Read the dialog box, and click *Continue*.

1. Your Session ID will appear. This is your host's unique 6-digit identifier.
2. Click *Start*.
3. Begin turning on your remotes.
4. When a remote connects, a fixed assigned number will appear on its display.
5. If the remotes do not connect, they are not configured with the correct Session ID. (Please refer to the Full User Guide for directions on how to change Session IDs.)
6. Click *Done* when all remotes have been assigned. Your remotes will turn off automatically.
